

THE BRAIN BRAKE

Lines to record

Read the lines under each picture. The picture is what will be on screen while you say them.

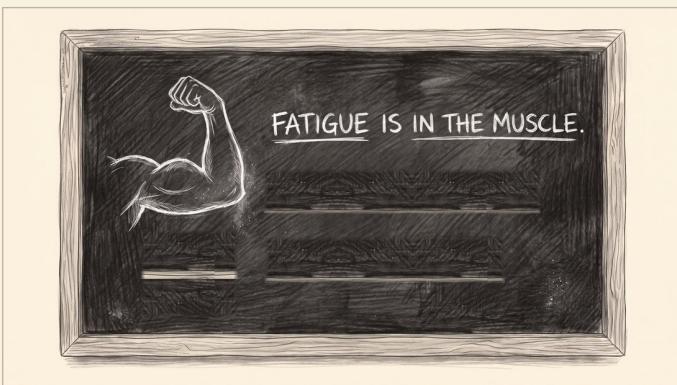

The lines in bold are the important ones. Small pause before each, then say it a little slower.

Two takes of everything, please.

MANAN

Nineteen twenty three. A. V. Hill puts runners on a treadmill and measures everything they do. His answer is simple.

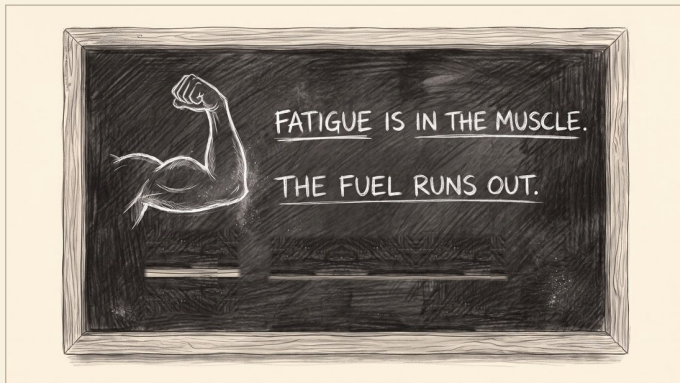

MANAN

Fatigue is in the muscle.

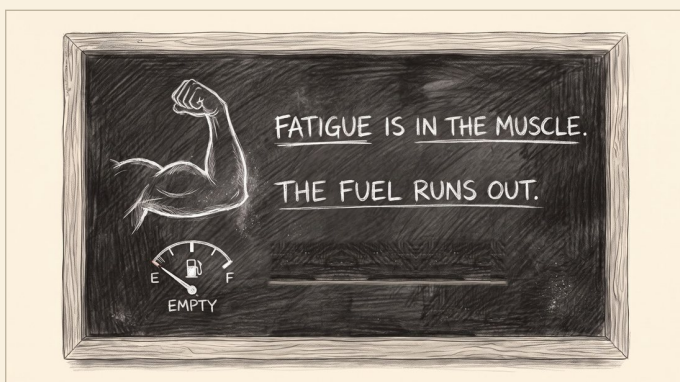

MANAN

You run, the muscle burns through its oxygen,

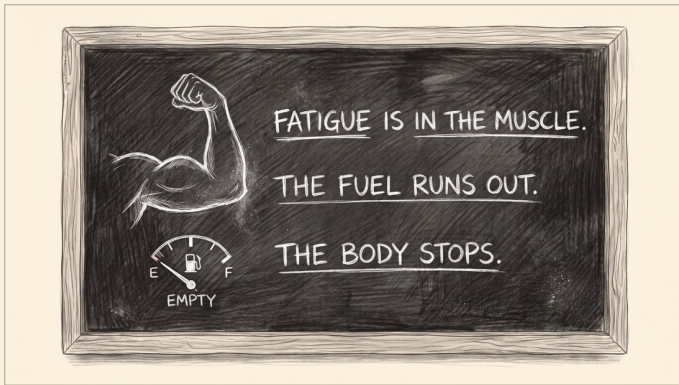

MANAN

The fuel runs out,

MANAN

and when the tank reads empty,

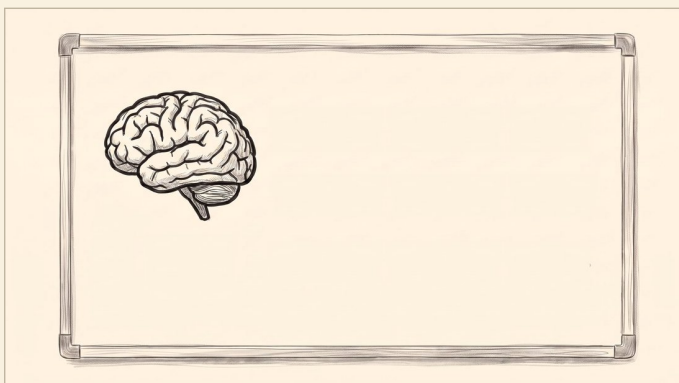

MANAN

The body stops.

MANAN

That's it. We're done. And for seventy four years, nobody reopened it.

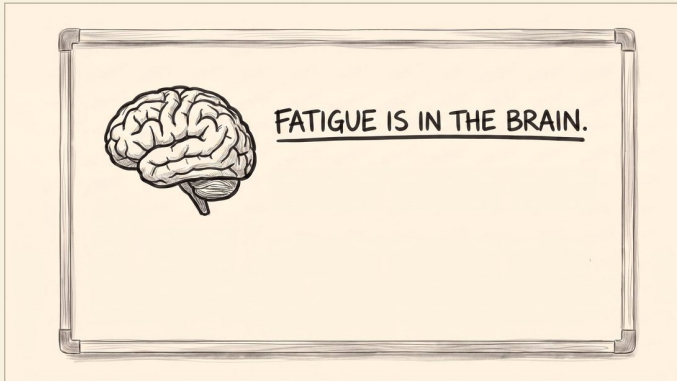

COACH BRAIN

Heart rate. Breath. Temperature.
Water. Distance. I read all of it, all the
time, and I ask one question. Can we
keep going safely?

COACH BRAIN

When the answer starts to look like no,
I slow you down. So no.

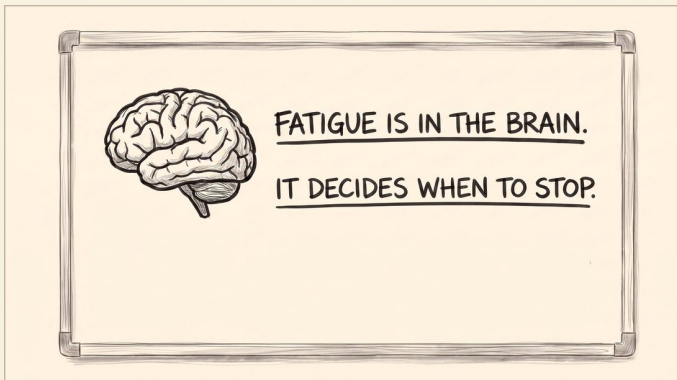

COACH BRAIN

Fatigue is in the brain.

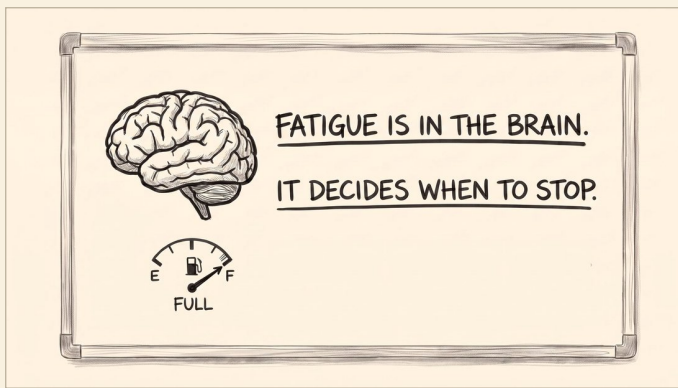

COACH BRAIN

Not in your legs. Up here. And I decide
long before anything is actually wrong.

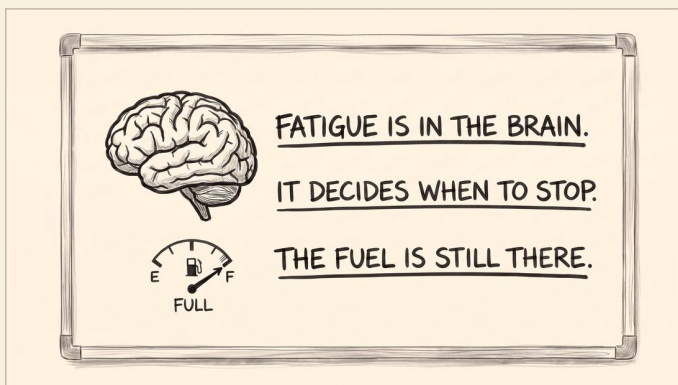

COACH BRAIN

It decides when to stop.

COACH BRAIN

And here is the part nobody tells you.
When I stop you,

COACH BRAIN

The fuel is still there.

COACH BRAIN

There is always something left. I am
just not letting you spend it.
